

Standoff Holder for Ultrasound Probe

ABSTRACT

An accommodative standoff holder **10** which can be used for both diagnostic and therapeutic ultrasound is disclosed. The described standoff holder **10** has the ability to be mounted on and utilized with transducers **20** of different sizes and shapes. The standoff holder **10** includes a gel insert **26** which is removable and self adjusting assuring contact between a human body, an animal, or other object and the acoustic window **22** of a transducer **22**. Further, a gel insert **26** and method of making gel inserts **26** from a gel pad **24** is described.
